

ESAS preliminary analysis

Shelly Li

Preliminary findings from ESAS data - Morton Plant

Current problems:

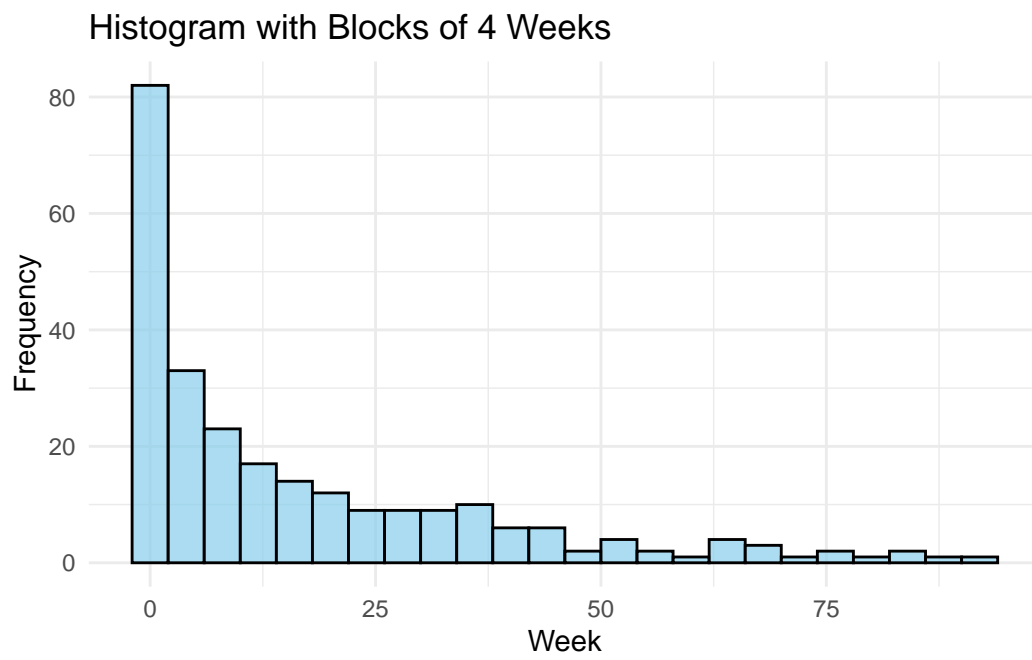

1. ! Do we remove ESAS values that is too far away from baseline?
2. SOme patients have more than one ED/hospitalization visit dates - do we only analyze the number of visits?

There are 254 observations, and 58 patients.

The following are the destribution of the weeks

n	mean	sd	median	min	max	range	skew	kurtosis	se
254	16.9	20.8	8.0	0.0	93.0	93.0	1.5	1.8	1.3

Histogram with blocks of 4 weeks - Remove
